

Paid Media Readiness Report

TARGET

Itsfifthsense

<https://itsfifthsense.com/>

Executive summary

56

C · READINESS

Mid-range readiness. A few fixable gaps are likely costing real revenue.

BIGGEST OPPORTUNITY

Channel coverage is the gap — Meta + Google together compound. Running only one leaves money on the table.

Scorecard

MEASUREMENT

B

70

 /100

Foundational tracking present but missing pieces — likely under-attributing revenue.

STRATEGY / CHANNEL PRESENCE

D

45

 /100

ESTIMATED

Light paid activity, or unable to confirm. Big upside in proper channel coverage.

LANDING PAGES

C

55

 /100

ESTIMATED

Mobile experience will leak conversions. Top priority before scaling spend.

CREATIVE

C

50

 /100

ESTIMATED

Creative volume + variety could not be measured. Estimated mid-range.

MEASUREMENT · 70/100

Foundational tracking present but missing pieces — likely under-attributing revenue.

- Meta Pixel detected
- GA4 detected
- Google Ads conversion tag detected
- First-party / server-side tagging hint
- No Tag Manager — manual tag governance is fragile

STRATEGY / CHANNEL PRESENCE · 45/100 ESTIMATED

Light paid activity, or unable to confirm. Big upside in proper channel coverage.

- Google Ads conversion tag on-page (running Google Ads)
- Schema.org: BreadcrumbList, ListItem, Organization, SearchAction
- 20 discoverable internal pages
- Lead-capture form present
- Clear CTA present (e.g. "Add to cart")
- No Facebook Page resolved from the site

LANDING PAGES · 55/100 ESTIMATED

Mobile experience will leak conversions. Top priority before scaling spend.

- Mobile viewport set
- Title is 17 chars (target 30-65)
- PageSpeed Insights unavailable — scored on on-page proxies only

CREATIVE · 50/100 ESTIMATED

Creative volume + variety could not be measured. Estimated mid-range.

- META_ACCESS_TOKEN not configured
- Creative pillar capped at 50 in absence of Ad Library data

Prioritized fixes

Ranked by leverage: which fix unlocks the most revenue per hour of effort.

Add Conversions API alongside Meta Pixel

#1

iOS + browser tracking loss costs roughly 20-30% of attributed conversions. CAPI recovers them server-side.

Adopt Google Tag Manager

#2

Hard-coded tags rot. GTM gives one place to audit, version, and consent-gate every pixel.

Add an Open Graph image

#3

Any time the URL gets shared (LinkedIn DMs, Slack, sales), a missing OG card looks unprofessional and tanks CTR.

Rewrite the page title (current length 17 chars)

#4

Title under 30 chars wastes SERP real estate; over 65 gets truncated. Both cost organic and paid CTR.

These are surface-level signals from public data. ROI Labs delivers a full audit — including account-level data, account structure, creative diagnostics, and a 90-day plan — within 24 hours.

support@roilabs.in · roilabs.in/#contact

Methodology: ROI Labs Auditor scores observable public signals (tracking stack, PageSpeed, Meta Ad Library, on-page strategy). It cannot measure ad spend, ROAS, or internal analytics. Signals we cannot directly observe are labelled "Estimated" or "Not available."
