

[001] THE MONEY YOUR PAID MEDIA IS LEAVING ON THE TABLE

Your ROAS looks great. *Your bank balance disagrees.*

You're scaling Meta and Google spend, but profit isn't following. Platform-reported ROAS double-counts, ignores margin, and runs on leaking tracking — so you're bidding into the dark and paying for it every day. We run paid media end to end, optimised for what actually hits your account.

90%

of most brands' paid budget belongs on Meta + Google. We run both, in-house.

24h

to your free audit — a clear read and a shortlist of fixes.

4

growth levers we rebuild: strategy, creative, landing pages, measurement.

1

team, end to end — no handoffs, no outsourced media buyers.

[002] WHAT IS ACTUALLY HAPPENING

- **Platform ROAS is not profit.**

Meta and Google report on last-click, double-count each other, and ignore margin. We optimise to contribution profit, not a dashboard number.

- **Your tracking is leaking.**

Without CAPI and server-side tracking, iOS and ad blockers hide conversions — the algorithm bids on partial data and wastes budget.

- **Creative is tested at the campaign level.**

Creative is the biggest lever on Meta. Testing whole campaigns instead of individual assets burns spend on losers.

- **Performance Max is a black box.**

Left unstructured, PMax quietly spends on brand and junk placements while claiming the credit.

[003] THE ROI MATH (CONSERVATIVE)

IF YOU SPEND ~\$20,000/MONTH ON ADS

Free ads audit	\$0
Management (min)	from \$1,500/mo
Wasted spend typically recovered	15–30%
On \$20k/mo, that's	\$3,000–\$6,000/mo
Net effect on profit	Measurable

BREAK-EVEN AT JUST *1 recovered month*

[004] WHAT CHANGES IN 90 DAYS

01 You see true revenue, not platform ROAS

CAPI + server-side tracking fixed; reporting on contribution margin and blended ROAS.

02 Budget moves to what actually converts

Wasted spend cut, winners scaled, creative tested at the asset level — weekly.

03 Profitable, repeatable scale

A clean Meta + Google account you can pour budget into with confidence.

[005] THE 90-DAY ENGAGEMENT — WHAT WE ACTUALLY DO FOR YOU

Phase 01

Audit & Fix Tracking

DAYS 1-14

- Full ad account + tracking audit
- Pixel, CAPI, GA4 + server-side setup
- True revenue attribution baseline
- Competitive ad teardown
- Wasted-spend identification

Phase 02

Rebuild & Create

DAYS 15-60

- Restructure Meta + Google campaigns
- Asset-level creative shipped weekly
- Landing pages built for ad intent
- Advantage+ & Performance Max, done right
- Margin-based budget allocation

Phase 03

Scale & Report

DAYS 61-90

- Scale budget on proven winners
- Weekly revenue-based reporting
- Negative-keyword + exclusion discipline
- Creative refresh pipeline
- Next-quarter growth plan

[006] WHY THIS HAS TO HAPPEN NOW, NOT IN 6 MONTHS

Wasted spend compounds.

Every month on broken tracking you over-pay for the same buyers and under-fund the real winners. It does not fix itself.

Your competitors are scaling profitably.

While you optimise to a vanity ROAS, brands with clean measurement out-bid you in the same auctions every day.

Signal loss isn't going away.

iOS, ad blockers and privacy rules keep eroding pixel-only tracking. Server-side and CAPI are now table stakes, not nice-to-haves.

Creative is the new targeting.

Meta's algorithm rewards volume and variety of creative. Campaign-level testing can't keep up with brands shipping weekly.
